Executive Summary

Cottage Health—located in Santa Barbara County, California and comprised of Santa Barbara Cottage Hospital, Goleta Valley Cottage Hospital, and Santa Ynez Valley Cottage Hospital—is committed both to serving the South Coast communities' acute care needs and, from a broader perspective, identifying and addressing community health needs.

In order to meet the needs of the service area, Cottage Health conducted a Community Health Needs Assessment, which included information from community members and leaders along with public health data. The results of the assessment include the following areas of opportunity:

- Access to Healthcare Services
- Cancer
- Dementias, Alzheimer's Disease
- Disability & Activity Limitations
- Heart Disease & Stroke
- Immunization & Infectious Diseases
- Infant Health & Family Planning
- Injury
- Mental Health & Mental Disorders
- Nutrition, Physical Activity & Weight
- Oral Health
- Substance Abuse

Cottage Health will provide programs and collaborate with community organizations to address the needs and works towards a healthier community.

Community Health Needs Assessment

In the summer of 2012, Santa Ynez Valley Cottage Hospital embarked on a comprehensive Community Health Needs Assessment (CHNA) process to identify and address the key health issues for the local community.

Santa Ynez Valley Cottage Hospital

Offering acute-care services to the residents and visitors of Santa Ynez Valley since 1964, the 11-bed hospital became affiliated with Cottage Health in 1995, and today continues to provide inpatient and outpatient surgery, 24-hour emergency services, and a physician office rental program that brings specialists to the Valley on a regular basis.

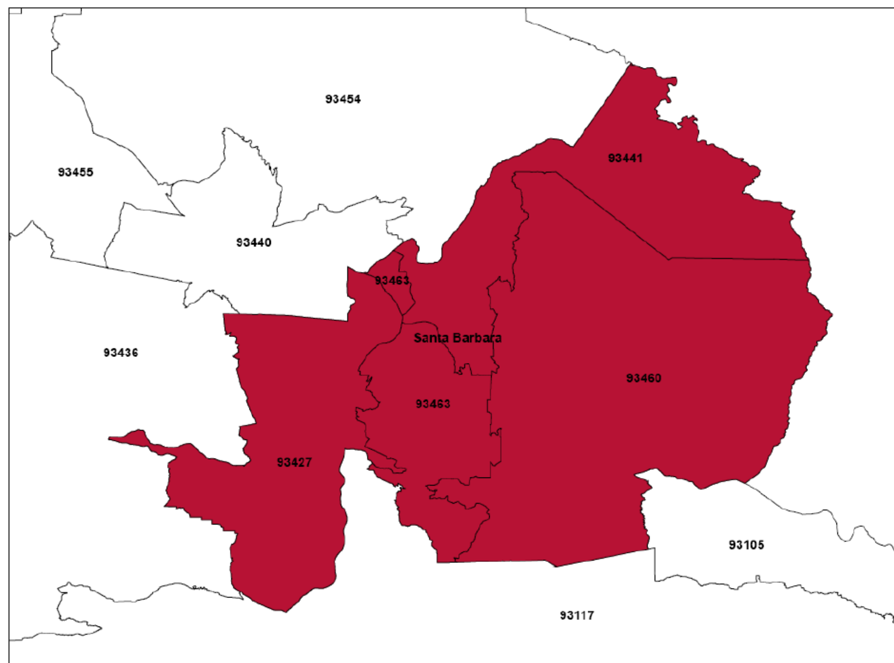
Ranked in the top 10 percent for patient satisfaction on the West Coast, Santa Ynez Valley Cottage Hospital offers personal, comprehensive health care services, including:
Emergency Department open 24 hours a day, every day, with short wait times

- Radiology services, including MRI, CT scan, bone density scan
- Digital mammography
- Surgical services, including outpatient surgical procedures and endoscopic procedures
- Cardiopulmonary rehabilitation
- Laboratory services
- Physicians Specialty Clinics
- Wound Care Clinics
- Nutrition Counseling
- Award-winning care ranked in the top 10 percent for patient satisfaction on the West Coast
- and more

Community Served

Community Definition

Santa Ynez Valley Cottage Hospital's community, as defined for the purposes of the Community Health Needs Assessment, included each of the residential ZIP Codes that comprise the hospital's primary service area, including: 93427,93441, 93460, 93463, and 93464. This community definition, determined based on the ZIP Codes of residence of recent patients, is illustrated in the following map.



Demographics of Santa Barbara County

With a population of 435,697, Santa Barbara County encompasses 2,750 square miles of land and inland water area. Much of the county is mountainous. The Santa Ynez, San Rafael and Sierra Madre mountains extend in a predominately east-west direction. Within the county, there are numerous fertile agricultural areas, including the Santa Ynez, Lompoc, Santa Maria, and Cuyama Valleys, and the southeast coastal plain. These areas, which include most of the developed land, also accommodate the majority of the population. Los Padres National Forest, in the eastern part of the county, covers approximately 44% of the total county area. "North County" refers to the area west and north of Gaviota, and includes the Santa Ynez, Lompoc, Santa Maria, and Cuyama valleys. "South County" refers to the Goleta, Santa Barbara, and Carpinteria coastal plain.

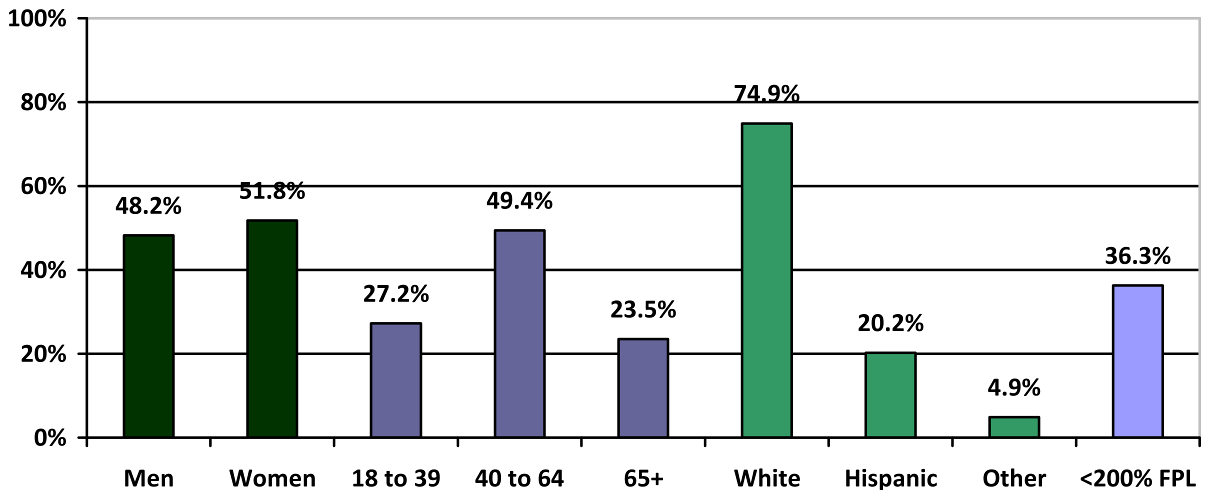
- Santa Barbara County's median income is $62,000, which is the same as the State of California's. Within the tri-counties region, Santa Barbara County's median income is below Ventura County's ($77,000), and higher than San Luis Obispo County's ($59,000). Several small census tracts

within southern Santa Barbara County are known to have twice the median household compared to the county as a whole.

- Out of a workforce of 197,400 residents, the six top employment sectors account for 71% of this population: Government (38,000); Leisure and Hospitality (22,000); Professional and Business Services (21,700); Educational and Health Services (20,900); Agriculture, Forestry, Fishing and Hunting (18,700); and Retail Trade (17,900).

- The poverty rate for Santa Barbara County is 14.4%, which is the same as the State of California. Within the tri-counties region, Santa Barbara County's poverty rate is slightly higher than San Luis Obispo County's (population 274,000, poverty rate 13.2%), and Ventura County's (population 840,000, poverty rate 9.9%). The 2013 Federal Poverty Level guidelines place the poverty threshold for a family of four at $23,550 annual household income or lower.

The characteristics of those included in the Community Health Needs Assessment for Santa Ynez Valley Cottage Hospital are shown in the chart below.



Community Resources Available

The following represent potential measures and resources (such as programs, organizations, and facilities in the community) available to address the significant health needs identified. This list is not exhaustive, but rather outlines those resources identified in the course of conducting the Community Health Needs Assessment.

- Buellton Medical Center
- Golden Inn Village
- Local Social Service Agencies
- People Helping People
- Private Physicians
- Public Transportation
- Santa Ynez Valley
- Tribal Health Clinic
- Visiting Nurse and Hospice Care (VNHCSB)
- YMCA

How CHNA Data Were Obtained

Project Goals

This Community Health Needs Assessment is a systematic, data-driven approach to determining the health status, behaviors, and needs of residents in the service area of Santa Ynez Valley Cottage Hospital. Subsequently, this information may be used to inform decisions and guide efforts to improve community health and wellness.

A Community Health Needs Assessment provides information so that communities may identify issues of greatest concern and decide to commit resources to those areas, thereby making the greatest possible impact on community health status. This Community Health Needs Assessment will serve as a tool toward reaching three basic goals:

- To improve residents' health status, increase their life spans, and elevate their overall quality of life. A healthy community is not only one where its residents suffer little from physical and mental illness, but also one where its residents enjoy a high quality of life.
- To reduce the health disparities among residents. By gathering demographic information along with health status and behavior data, it will be possible to identify population segments that are most at-risk for various diseases and injuries. Intervention plans aimed at targeting these individuals may then be developed to combat some of the socio-economic factors, which have historically had a negative impact on residents' health.
- To increase accessibility to preventive services for all community residents. More accessible preventive services will prove beneficial in accomplishing the first goal (improving health status, increasing life spans, and elevating the quality of life), as well as lowering the costs associated with caring for late-stage diseases resulting from a lack of preventive care.

This assessment was conducted on behalf of Cottage Health by Professional Research Consultants, Inc. (PRC). PRC is a nationally recognized healthcare consulting firm with extensive experience conducting Community Health Needs Assessments such as this in hundreds of communities across the United States since 1994.

Methodology

This assessment incorporates data from both quantitative and qualitative sources. Quantitative data input includes primary research (the Community Health Survey) and secondary research (vital statistics and other existing health-related data); these quantitative components allow for comparison to benchmark data at the state and national levels. Qualitative data input includes primary research gathered from a key informant focus group.

Community Health Survey

The survey instrument used for this study is based largely on the Centers for Disease Control and Prevention (CDC) and Behavioral Risk Factor Surveillance System (BRFSS), as well as various other public health surveys and customized questions addressing gaps in indicator data relative to health promotion

and disease prevention objectives and other recognized health issues. The final survey instrument was developed by Santa Ynez Valley Cottage Hospital and PRC.

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the Community Health Survey. Thus, to ensure the best representation of the population surveyed, a telephone interview methodology — one that incorporates both landline and cell phone interviews — was employed. The primary advantages of telephone interviewing are timeliness, efficiency, and random-selection capabilities.

The sample design used for this effort consisted of a random sample of 402 individuals age 18 and older in the Santa Ynez Valley Cottage Hospital service area. Once the interviews were completed, these were weighted in proportion to the actual population distribution to represent the primary service area appropriately as a whole. All administration of the surveys, data collection, and data analysis was conducted by PRC.

The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in the defined area with a high degree of confidence.

Public Health, Vital Statistics, & Other Data

A variety of existing (secondary) data sources was consulted to complement the research quality of this Community Health Needs Assessment. Data for the Santa Ynez Valley Cottage Hospital service area were obtained from the following sources:

- California Department of Public Health
- Centers for Disease Control & Prevention
- National Center for Health Statistics
- State of California Department of Justice
- United States Census Bureau
- United States Department of Health and Human Services
- United States Department of Justice, Federal Bureau of Investigation

Note that secondary data reflect county-level data (Santa Barbara County).

Key Informant Focus Groups

As part of the community health assessment, a focus group was held on July 31, 2012. The focus group participants included nine key informants, including health professionals, social service providers and other community leaders. Representatives of public health were contacted separately to offer input to this assessment.

A list of recommended participants for the focus group was provided by Santa Ynez Valley Cottage Hospital. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall. Participants included several individuals who work with low-income, minority or other medically underserved populations, and those who work with persons with chronic disease conditions.

Information Gaps

While this assessment is quite comprehensive, it cannot measure all possible aspects of health in the community, nor can it adequately represent all possible populations of interest. It must be recognized that these information gaps in some ways might limit the ability to assess all of the community's health needs.

For example, certain population groups — such as the homeless, institutionalized persons, or those who only speak a language other than English or Spanish — are not represented in the survey data. Other population groups — for example, pregnant women, lesbian/gay/bisexual/transgender residents, undocumented residents, and members of certain racial/ethnic or immigrant groups — might not be identifiable or might not be represented in numbers sufficient for independent analyses.

In terms of content, this assessment was designed to provide a comprehensive and broad picture of the health of the overall community. However, there are certainly a great number of medical conditions that are not specifically addressed.

Vulnerable Populations

The Community Health Needs Assessment analysis and report yielded a wealth of information about the health status, behaviors, and needs for the local population. A distinct advantage of the primary quantitative (community health survey) research is the ability to segment findings by geographic, demographic and health characteristics to identify the primary and chronic disease needs and other health issues of vulnerable populations, such as uninsured persons, low-income persons, and racial/ethnic minority groups.

For additional statistics about uninsured, low-income, and minority health needs please refer to the complete Community Health Needs Assessment report, which can be viewed online at http://santaynezvalley.healthforecast.net.

Public Dissemination

This Community Health Needs Assessment is available to the public using the following URL: http://santaynezvalley.healthforecast.net. HealthForecast.net™ is an interactive, dynamic tool designed to share Community Health Needs Assessment data with community partners and the public at large.

This site:

- Informs readers that the Community Health Needs Assessment report is available and provides instructions for downloading it;
- Offers the Community Health Needs Assessment report document in a format that, when accessed, downloaded, viewed, and printed in hard copy, exactly reproduces the image of the report;
- Grants access to download, view, and print the document without special computer hardware or software required for that format (other than software that is readily available to members of

the public without payment of any fee) and without payment of a fee to the hospital organization or facility or to another entity maintaining the website.

Links to this dedicated HealthForecast.net™ site are also made available at Cottage Health's website at: www.cottagehealth.org.

Santa Ynez Valley Cottage Hospital will provide any individual requesting a copy of the written report with the direct website address, or URL, where the document can be accessed. Santa Ynez Valley Cottage Hospital will also maintain at its facilities a hardcopy of the Community Health Needs Assessment report that may be viewed by any who request it.

Community Health Summary Tables

The following tables provide an overview of indicators in the Santa Ynez Valley Cottage Hospital primary service area, grouped to correspond with the focus areas presented in Healthy People 2020.

The columns to the right of the service area column provide comparisons between the service area and any available state and national findings, and Healthy People 2020 targets. Colors indicate whether the primary service area compares favorably (green), unfavorably (red), or comparably (white) to these external data. Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.

Prioritized Health Needs

After reviewing the Community Health Needs Assessment findings, leaders from Santa Ynez Valley Cottage Hospital met on February 26 and March 3, 2014, to determine the health needs to be prioritized for action. During the detailed presentation of the Community Health Needs Assessment findings, consultants from PRC used audience response system technologies to lead steering committee members through a process of understanding key local data findings (areas of opportunity) and ranking identified health issues against the following established, uniform criteria:

- Scope & Severity - the number of persons affected along with the degree to which the issue affects or exacerbates other quality of life and health-related issues. Also, take into account variance from benchmark data and Healthy People targets.
- Ability to Impact - the ability Santa Ynez Valley Cottage Hospital can reasonably affect the issue, given available resources.

From this exercise, the areas of opportunity were prioritized as follows:

1. Heart Disease & Stroke
2. Access to Healthcare Services
3. Dementias, Alzheimer's Disease
4. Mental Health & Mental Disorders
5. Immunization & Infectious Diseases
6. Nutrition, Physical Activity, & Weight
7. Substance Abuse
8. Cancer
9. Disability & Activity Limitations
10. Infant Health & Family Planning
11. Oral Health
12. Injury

Community-Wide Community Benefit Planning

As individual organizations begin to parse out the information from the Community Health Needs Assessment, it is Santa Ynez Valley Cottage Hospital's hope and intention that this will foster greater desire to embark on a community-wide community health improvement planning process. Santa Ynez Valley Cottage Hospital has expressed this intention to partnering organizations and is committed to being a productive member in this process as it evolves.

Implementation Strategy

For more than 25 years, Santa Ynez Valley Cottage Hospital has demonstrated its commitment to meeting the health needs of the community. This summary outlines Santa Ynez Valley Cottage Hospital's plan (Implementation Strategy) to address community health needs by sustaining efforts operating within a targeted health priority area along with promoting an understanding of these health needs among other community organizations and within the public itself.

Hospital-Level Community Benefit Planning

Priority Health Issues To Be Addressed

In consideration of the top health priorities identified through the Community Health Needs Assessment process — and taking into account hospital resources and overall alignment with the hospital's mission, goals and strategic priorities — it was determined that Santa Ynez Valley Cottage Hospital would focus on developing and/or supporting strategies and initiatives to improve:

- Access to Healthcare Services
- Cancer
- Dementias, Alzheimer's Disease
- Disability & Activity Limitations
- Heart Disease & Stroke
- Immunization & Infectious Diseases
- Infant Health & Family Planning
- Injury
- Mental Health & Mental Disorders
- Nutrition, Physical Activity & Weight
- Oral Health
- Substance Abuse

Cottage Health provides programs that address all identified priority needs, including funding for community programs, which includes grants, sponsorships, and health fairs. In addition, Santa Ynez Valley Cottage Hospital has programs that address some of the community needs. Therefore, all community health needs will be addressed

Integration With Operational Planning

Beginning in 2013 and going forward each year, the Board approved Cottage Health Top Goals document will include an annual community benefit goal.

.

Implementation Strategies & Action Plans

The following displays outline key community benefit initiatives that Santa Ynez Valley Cottage Hospital plans to address the priority health issues chosen for action from 2013 through 2015. System-wide programs are also listed that will help address the community needs.

Key Terms & Definitions

Program Name	
Community Health Need	Areas of opportunity identified in the Community Health Needs Assessment that will be addressed by the program.
Description	Overview of the community benefit program.
Vision	Program's purpose and aspiration.
Long-Term Community Goals	Factors identified in the 2012 Community Health Needs Assessment, which will be measured every three years continually into the future.
Annual Goals	Cottage Health's activity metrics to address the community needs. Benchmarks are based on activity reported in 2012 and 2013 in the Community Benefit Report for OSPHD.
Strategies & Objectives	Program activities to reach the goals and ultimately vision.
